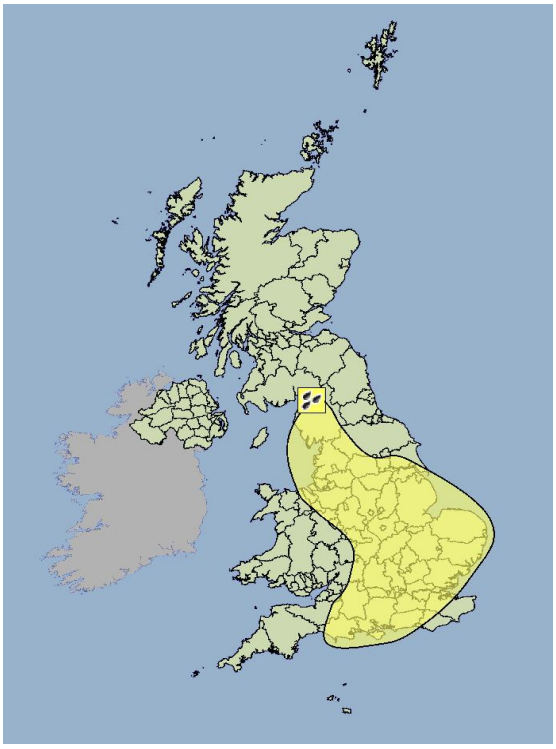
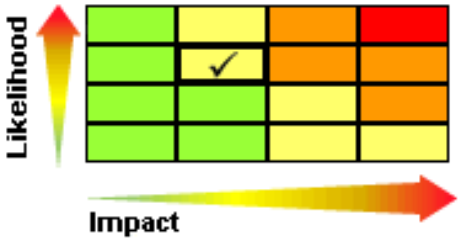
National Severe Weather Warning Service





Chief Forecasters Assessment
A complex frontal system will maintain relatively warm and humid conditions across much of the area. Where any sunshine breaks through, rising temperatures will help trigger scattered heavy downpours, with local thunder, which could be slow-moving, given light winds. 15-20 mm of rain could fall locally within an hour with 30-40 mm possible within a few hours. Such amounts could cause localised surface water flooding, especially if they affect urban areas.

There remains considerable uncertainty regarding areas more at risk. Therefore this warning will be kept under review and updated as new information becomes available.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **11:00 on Sun, 12th Jun 2016** until **21:00 on Sun, 12th Jun 2016**

Scattered slow-moving heavy, thundery downpours are likely to develop across the area on Sunday. The showers and thunderstorms should ease from the west in the evening.

Although some places will miss the worst of the downpours, please be aware of the risk of localised surface water flooding and possible disruption to travel.
